### · 8.2 Exposure controls

#### · Individual protection measures, such as personal protective equipment

##### · General protective and hygienic measures

Keep away from foodstuffs, beverages and food.  
Take off all contaminated clothing immediately.  
Wash hands during breaks and at the end of the work.  
Avoid contact with the skin.  
Avoid contact with the eyes and skin.

##### · Breathing equipment:

Approved dust respirators must be used for dusty conditions or if dust levels exceed established standards.  
Fine-dust mask, filter P1

##### · Hand protection

Use gloves of stable material (i.e. nitril rubber).  
The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.  
Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture.  
Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

##### · Material of gloves

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

##### · Penetration time of glove material

The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.

With solid dry substances permeation is not to be expected. Therefore the breakthrough-time for this protective glove has not been measured.

##### · Eye/face protection

Tightly sealed safety glasses.

- **Body protection:** Alkaline resistant protective clothing

Do not allow undiluted product or large quantities of it to reach ground water, water bodies or sewage system.

## SECTION 13: Disposal considerations
